

PAULT DOCUMENTATION

Limitations

Source: docs/LIMITATIONS.md

Theme: Clean Technical

Generated: February 26, 2026

Current limitations

- Export/import is not implemented.
- Global hotkey is fixed to Cmd+Shift+P and is not configurable yet.
- Template variable names are limited to alphanumeric and underscore tokens matched as `{{name}}`.
- PaultCore models (workflows, variables, usage logs) are not integrated with the macOS app target.
- No iOS app target is included in this repository.
- No application-layer encryption; relies on macOS device encryption.
- No built-in retention or purge policy.
