

PAULT DOCUMENTATION

Runbook

Source: docs/RUNBOOK.md

Theme: Clean Technical

Generated: February 26, 2026

Operational runbook

Install

- Deploy the signed app bundle using your standard distribution method (PKG, MDM, or managed catalog).
- Launch once to initialize the SwiftData store and preferences.

Uninstall

- Quit the app.
- Remove the app bundle.
- Optionally remove the container directory to delete all data (see docs/DATA_STORE.md).

Reset preferences

- Preferences are stored in UserDefaults for bundle id Jonathan-Hines-Dumitru.Pault.
- To reset via Terminal:

```
defaults delete Jonathan-Hines-Dumitru.Pault
```

Reset data

- Quit the app.
- Delete the app container directory (see docs/DATA_STORE.md).

Collect logs

- Open **Console.app** and filter for process name Pault.
- Look for SwiftData load errors or hotkey registration failures.

Verify core features

- Main window: create, edit, template variables, tag, favorite, archive.
- Menu bar popover: search, copy, paste, and create.
- Hotkey launcher: Cmd+Shift+P opens and performs copy/paste actions.
