Configuration

Pault stores preferences via `@AppStorage` in `UserDefaults`.

Preference keys

Key	Type	Default	Notes
-----	------	---------	-------

---	---	---	---
-----	-----	-----	-----

<code>globalHotkey</code>	String	<code>Cmd+Shift+P</code>	Display-only; hotkey is not configurable yet.
---------------------------	--------	--------------------------	---

<code>launchAtLogin</code>	Bool	<code>false</code>	Controls <code>SMApService</code> registration.
----------------------------	------	--------------------	---

<code>showDockIcon</code>	Bool	<code>false</code>	Toggles activation policy (accessory vs regular).
---------------------------	------	--------------------	---

<code>defaultAction</code>	String	<code>showOptions</code>	Launcher behavior on select: <code>showOptions</code> , <code>copy</code> , or <code>paste</code> .
----------------------------	--------	--------------------------	---

<code>pasteDelay</code>	Double	<code>100</code>	Delay in milliseconds before simulating <code>Cmd+V</code> paste.
-------------------------	--------	------------------	---

Managed settings

- No managed configuration profile support is implemented yet.
- If you need to pre-seed defaults, use your MDM tooling to write the above keys into the app's preferences domain.
