Phase 2.5 Brainstorms — Design Notes for Future Phases

These are design-only brainstorms from user testing feedback. No code changes — just ideas for future implementation.

2.5C: Settings Page Expansion

Current settings after paste removal: 2 tabs, ~3 items total. Feels sparse.

Top Candidates to Add

1. **Appearance tab** — Font size slider, compact mode toggle, accent color override
2. **Data Management tab** — Export/Import prompts (JSON), clear all data, storage path info, prompt count
3. **About section in General tab** — Version display, reset all settings button

Deferred (Complex)

4. Keyboard Shortcuts customization (requires Carbon/HotKey framework integration)

2.5D: File Menu Bar Expansion

Current: only "New Prompt" (Cmd+N).

Top Candidates to Add

1. **Edit menu** — Copy Prompt (Cmd+C), Duplicate Prompt (Cmd+D)
2. **View menu** — Toggle Inspector (Cmd+I), Toggle Sidebar (Cmd+Option+S)
3. **Help menu** — Keyboard Shortcuts Reference, Report a Bug link

Deferred (Depends on Data Management)

4. Prompt menu — Import/Export Prompts

2.5E: About Screen

No custom About screen exists currently.

Recommended: Branded About with Links

- App icon centered at top
- "Pault" in large font + tagline
- Version/build from `Bundle.main`
- Clickable links: website, GitHub, feedback email
- Copyright line
- Override default About via `CommandGroup(replacing: .appInfo)`
